

Deployment / Silent Install of SoftMaker Office 2021

SoftMaker Office 2021 is delivered as two MSI files:

- 32-bit version: ofw2021_32.msi
- 64-bit version: ofw2021_64.msi

Both can be used to install SoftMaker Office silently and to deploy it using common deployment tools.

This document describes the command-line parameters that let you control how the software is installed.

Overview

Run the `msiexec` program to install the MSI file. In the command line, the following parameters may be given:

Mandatory: Choose the folder in which to install SoftMaker Office	<code>APPLICATIONFOLDER="..."</code>	❶
Silent or verbose install	<code>/qn</code> <code>/qb</code>	❷
Select the language for the templates, sample documents, etc.	<code>ProductLanguage=...</code>	❸
Select the SoftMaker Office applications to install (if you do not add any of these, a full install will be done).	<code>INSTALLTM=1</code> <code>INSTALLLPM=1</code> <code>INSTALLLPR=1</code> <code>INSTALLLBM=1</code>	❹
Associate certain file types with SoftMaker Office	<code>OPT_...=1</code>	❺
Place application icons on the desktop and/or the Windows Taskbar	<code>DESKTOPICONS=1</code> <code>TASKBARICONS=1</code>	❻

A typical command line to install the **32-bit** version of SoftMaker Office 2021 on a **32-bit** version of Microsoft Windows looks like this:

```
msiexec /i "ofw2021_32.msi" /qn APPLICATIONFOLDER="c:\Program Files\SoftMaker Office 2021"
```

A typical command line to install the **32-bit** version of SoftMaker Office 2021 on a **64-bit** version of Microsoft Windows looks like this:

```
msiexec /i "ofw2021_32.msi" /qn APPLICATIONFOLDER="c:\Program Files (x86)\SoftMaker Office 2021"
```

A typical command line to install the **64-bit** version of SoftMaker Office 2021 on a **64-bit** version of Microsoft Windows looks like this:

```
msiexec /i "ofw2021_64.msi" /qn APPLICATIONFOLDER="c:\Program Files\SoftMaker Office 2021"
```

Note: If an older revision of SoftMaker Office 2021 is already installed, it will be automatically uninstalled.

❶ APPLICATIONFOLDER: The installation folder

The parameter `APPLICATIONFOLDER` is mandatory. It specifies the folder in which SoftMaker Office will be installed:

```
APPLICATIONFOLDER="m:\Shared\SoftMaker Office 2021"
```

Important: The setup process runs with administrative rights. Ensure that the path given here is accessible from the Administrator account. You can test this by running `cmd.exe` with administrative rights (right-click on it and choose "Run as administrator") and trying to `chdir` to this path.

② /qn, /qb: Silent or verbose install

`/qn` initiates a silent install. If you wish to receive feedback during the installation, replace it with `/qb`.

③ ProductLanguage: Install supporting files in a specific language

To install supporting files (such as the templates, FAQ document, the default SmartText file or the sample database) in a language other than English, add the `ProductLanguage` parameter with the desired language:

Arabic	<code>ProductLanguage=1025</code>
Bulgarian	<code>ProductLanguage=1026</code>
Danish	<code>ProductLanguage=1030</code>
Dutch	<code>ProductLanguage=1043</code>
Estonian	<code>ProductLanguage=1061</code>
Finnish	<code>ProductLanguage=1035</code>
French	<code>ProductLanguage=1036</code>
German	<code>ProductLanguage=1031</code>
Greek	<code>ProductLanguage=1032</code>
Hungarian	<code>ProductLanguage=1038</code>
Indonesian	<code>ProductLanguage=1057</code>
Italian	<code>ProductLanguage=1040</code>
Japanese	<code>ProductLanguage=1041</code>
Kazakh	<code>ProductLanguage=1087</code>
Korean	<code>ProductLanguage=1042</code>
Latvian	<code>ProductLanguage=1062</code>
Lithuanian	<code>ProductLanguage=1063</code>
Polish	<code>ProductLanguage=1045</code>
Portuguese (Portugal)	<code>ProductLanguage=1046</code>
Portuguese (Brazil)	<code>ProductLanguage=2070</code>
Romanian	<code>ProductLanguage=1048</code>
Russian	<code>ProductLanguage=1049</code>
Simplified Chinese	<code>ProductLanguage=2052</code>
Slovenian	<code>ProductLanguage=1060</code>
Spanish	<code>ProductLanguage=1034</code>

Swedish	ProductLanguage=1053
Turkish	ProductLanguage=1055
Ukrainian	ProductLanguage=1058

If you do not provide the `ProductLanguage=` parameter, the regional settings of the Windows computer will be used to determine the language.

If a localized version of a supporting file is not available, the English version will automatically be installed instead.

Here is an example for installing with German supporting files:

```
msiexec /i "ofw2021_32.msi" /qn ProductLanguage=1031 APPLICATIONFOLDER="c:\Program Files\SoftMaker Office 2021"
```

④ Select the applications to install

By default, **all** applications of SoftMaker Office are installed. If you wish to install only specific applications, add command-line parameters for those:

Install TextMaker	INSTALLTM=1
Install PlanMaker	INSTALLPM=1
Install Presentations	INSTALLPR=1
Install BasicMaker	INSTALLBM=1
Install automatic updates for SoftMaker Office	INSTALLUPDATER=1

Example command line to only install TextMaker and PlanMaker, thereby skipping Presentations, BasicMaker and automatic updates:

```
msiexec /i "ofw2021_32.msi" /qn APPLICATIONFOLDER="c:\Program Files\SoftMaker Office 2021" INSTALLTM=1 INSTALLPM=1
```

⑤ OPT_MSO etc.: Associate file types with SoftMaker Office

To associate certain groups of file types (such as the Microsoft Office formats) with SoftMaker Office, add one or more of the following parameters:

Associate Microsoft Office files (.DOC, .DOCX, .XLS, .XLSX, .PPT, .PPTX etc.)	OPT_MSO=1
Associate OpenDocument files (.ODT, .OTT etc.)	OPT_OO=1
Associate additional files (.RTF, .CSV, .SLK etc.)	OPT_OTH=1

Example command line:

```
msiexec /i "ofw2021_32.msi" /qn APPLICATIONFOLDER="c:\Program Files\SoftMaker Office 2021" OPT_MSO=1
```

⑥ Place application icons on the desktop and the Windows Taskbar

The following options let you create icons on the desktop and pin them to the Windows Taskbar:

Create application icons on the desktop	DESKTOPICONS=1
Pin the applications to the Windows Taskbar	TASKBARICONS=1

/lv*: Tracing the installation

If you experience problems with the MSI installation, you should instruct it:

- to be verbose: In the command line, replace the /qn parameter with /qb
- to create a log file: Add the /lv* `Logfile.txt` parameter to the command line.

Example command line:

```
msiexec /i "ofw2021_32.msi" /qb APPLICATIONFOLDER="c:\Program Files\SoftMaker  
Office 2021" /lv* Logfile.txt
```

The log file will be created in your %TEMP% folder. If you need to contact our support team because of installation problems, please *always* include this log file with your e-mail.

A note about network installations

The installation runs with administrative rights, so keep the following in mind: Even if you as a regular user have access to network shares and mapped network drives, this is not automatically also true for the administrative user. When installing to a network share, make sure you have the required network shares connected and/or network drives mapped for the administrative user.
